

**NEW****X6P series****X6P-16In, X6P-8/8**

## WORLD'S FIRST A/D converters with true analog 1dB step gain control

Give your microphones a chance to show their quality!

X6P series microphone preamps now feature 1dB step control – not digitally calculated, but implemented in a fully analog form. This means an optimum signal-to-noise-ratio (SNR) for any gain step and a massive improvement in overall SNR performance.

--- other vendors with analog coarse and digital fine steps

— OPTOCORE with true analog 1dB steps

**Plus**

The X6P devices offer more than a high performance A/D conversion – they include the well-known OPTOCORE quality, software, OPTOCORE network support and seamless link to selected mixing desks.

**„Audio Quality – in the market of digital audio transport, OPTOCORE offers an unequalled level of sound quality; it is quite simply the best product available.“**
